The sequence has been subjected to integrity checks reguence accuracy, presence of a polya tail and contiguity reflect accurately this particular cDNA clone. However, there are have not been detected in our initial analyses such as internal reverse transcription of unspliced precursor NAS, and and relationship to other sequences, this sequence to reverse transcription of unspliced precursor NAS, and and relationship to other sequences, including its location (http://fruitfly.berkeley.edu) or send email to

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

(Nuc. Acids Res. 25:3389-3402) similarity are identified by BLAST flanked by consensus splice sites that maintained sequence continuity across the splice sites that maintained sequence identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                     OUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found to URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCING READ COVERAGE: Sequencing is completed to a minimum reads with a minimum of 2 clones and 2 clones and 3 reads with a minimum of 2 clones and 2 clones and 3 reads with no ambiguities or 2 chemistries with a minimum of 2 a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones.

Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (01-JUN-2002) Human Genome Sequencing Center, Deposit of Molecular and Human Genetics, Baylor College of Medicing Baylor Plaza, Houston, TX 77030, USA On Jun 1, 2002 this sequence version replaced gi:17998562.

The invention relates to human nucleic acids (AAI57798-AAI61369) and CCC the encoded polypeptides (AAM38642-AAM4213) with nootropic (CCC impunosuppressant and cytostatic accivity. The polypucleotides are useful CCC in gene therapy. A composition containing a polypeptide or polypucleotide (CCC system, such as peripheral nervous injuries, peripheral nervous containing a polypeptide or polypucleotide (CCC) localised neuropathies and central nervous system disease, such as CCC Alteral sclerosis, and Shy-Drager Syndrome, other uses include the CCC utilisation of the activity, chancer disease, amyotrophic CCC and thrombolytic activity, chancer disease, imune system suspension, CCC assays for receptor activity, cancer diseases and therapy, drug screening, CCC Note: The sequence data for this patent did not form part of the printed CCC specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         524 ANTGCCANGACTCTCCGCAACGATAACTCCAGCCGGTTTGGAAAGTACATGGATGTGCAG 583

The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC for identifying expressed genes. (I) is useful an ingene therapy techniques (II). The CC (II). The CC (III). The CC (III) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC disorders involving abstrant protein expression or biological activity of III). (II) are useful for generating partners are useful in medical CC disorders involving abstrant protein expression or biological activity of adaptostics, forensics, gene mapping, identification of mutations in CC and to produce other types of data and products dependent on DNA and CC specification, but was obtained in electronic format directly from WIPO xx at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                             Query Match

```
The invention relates to isolated polynucleotide (I) and CC polymeptide (II) sequences. (I) is useful as hybridisation probes. CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags cor identifying expressed genes. (I) is useful in gene therapy techniques CC in the common activity of (II) of the transition of (II). The common activity of (II) or to treat disease states involving CC quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical or CC insigning of sites expressing (II). (I) and (II) are useful for treating CC disgressing forensics, gene mapping, identification or biological activity. CC and to produce other types of data and products dependent on the color of sequences. Ass64197-Ass94564 represent novel human and CC specification, but was obtained in electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                          Š

                                                                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin, hinhibin activity, chemotactic/chemokinetic activity, hamoostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Zhao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and insecticides, theractions in higher eukaryotes for the development of discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072).

The sequence data for this patent did not form part of the printed at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics in higher eukaryotes for the development of discloses genomic DNA sequences (ABLIG176 ABL30511, expressed DNA sequences (ABLIG176 ABL30511, expressed DNA Sequences (ABLIG175) and the encoded proteins The sequence data for this patent did not form part of the printed at fftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutics for the development of discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABLIG1855) and the encoded proteins
                                                                                                                                                                                                                                                                         23-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the protein and coding sequences on number of human shear stress response proteins. These are useful diagnosis, treatment and screening of vascular diseases caused by arterioscierosis, including heart failure, post-PTCA restenosis and the protein stress of the protein stress of the protein stress of the protein and the protein stress of the protein and coding sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutics for the development of discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072).
                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                               Sequence 3874
                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 37252; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human enzyme CC polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences CC encoding them. The enzyme polypeptides of the invention may comprise the CI isomerases or ligases. The sequences of the invention are useful in the CI isomerases or ligases. The sequences of the invention are useful in the CI disorders including hyperproliferative disorders (e.g. cancer), CC (e.g. arthritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. phenylketronuria), inflammatory disorders (c.g. phenylketronuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. Albeimer's disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infectious disorders (e.g. influenza). The CC (e.g. infertility) and infertility and infertili
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 13.9

The polynucleotides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed at the large of the printed and the printed and the printed and the printed at the pri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    at ftp.wipo.int/pub/published_pct_sequences.
